Read Before Installing the Supervisor Series V5.2

Please read the following important information before installing or using the Supervisor Series V5.2.

Product Information

The Supervisor Series is a suite of terminal monitoring and logging utilities that consists of PHOTO and SUPERVISOR.

Originally written by Precision Business Systems, the Supervisor Series was later acquired by Security Pacific Software Services. After selling and maintaining the software for a number of years, Security Pacific Software's Dan Shoop placed version 5.0D of the Supervisor Series into the public domain in 1992.

The Supervisor Series is currently maintained by Hunter Goatley, VMS Systems Programmer for Western Kentucky University, Bowling Green, KY.

If you have any suggestions for improvements or new features, or would like to report a bug, please contact Hunter Goatley via e-mail at *goathunter@WKUVX1.BITNET* (preferred) or by phone at 502-745-5251.

Installation Information

The Supervisor Series V5.2 requires VMS v5.0 or later.

Contents of this Kit

This kit contains all of the materials necessary to install the Supervisor Series V5.2.

You will need approximately 3500 blocks of disk space to hold the installation kits.

The SUPSER052.% files make up the installation kit, which you should install with VMSINSTAL. Manuals are included in save set B (file SUPSER052.B) and are placed in the SUPSER_ROOT:[DOC] directory during the installation. The manuals are provided in PostScript, plain ASCII, and Bookreader versions. You can use BACKUP to retrieve them from the installation kit prior to installation:

```
$ BACKUP tape:SUPSER052.B/SAVE *.*
```

Release Notes Information

The release notes for the Supervisor Series V5.2 contain important installation-related information as well as a summary of changes since the last release. Also included is information on known problems, documentation errors, and restrictions. The release notes can be retrieved by using VMSINSTAL OPTIONS N or by the following command:

```
$ BACKUP/LOG SUPSER052.A/SAVE/SEL=*.RELEASE_NOTES *.*
```

Source Code

The save set SUPSER052.C contains the source code for the Supervisor Series. During the VMSINSTAL session, you will be given the opportunity to install the sources. However, if you are only interested in the sources, you can retrieve them using the following command:

```
$ BACKUP tape:SUPSER052.C/SAVE *.*
```
